

The Mensa Stretcher mattress is a reactive therapeutic surface for stage 1 to 4 wounds.

Main Features

- High-density reinforced edges to facilitate transfer
- Air chamber allowing locally better pressure reduction
- Air chambers distribute 30% of pressure to capsules
- Polymer carved in cubes for local adaptation to variable shapes and different body segments
- This minimizes contact pressure from head to toe and eliminates pressure transfer to other cells
- Silicone capsules allowing a 70% reduction in pressure exerted on the entire body at all times
- Promotes blood circulation
- Uniquely formulated elastomers
- Presents all the advantages of micro-fluid plus improved pressure reduction and mobilization
- Additional pressure reduction at feet
- Dimensions: 25" x 75" x 4" and 28" x 75" x 4"
- Other dimensions possible: adjustable to all stretcher models
- Maximum weight 400 lbs
- No contraindication
- Dartex cover
- Protected seams

Description

MATTRESS

- Optimal comfort
- Effective support from head to toe
- Minimizes contact pressure and shear forces
- Ergonomically adapts to different bed positions

COVER

- Increases patient comfort
- Protected seams
- Actifresh properties (Dartex cover)
- Bacteriostatic, fungistatic, antimicrobial
- Resists mould and rust development
- Prevents foul odours
- Prevents tissue degradation

Other Information

SURFACE GENERAL FEATURES

- Stretchable cover
- Standard bedding
- Quilted usable without negative effect
- Easy and efficient maintenance for care staff
