

FOR OCCUPATIONAL THERAPISTS

MENSA

Pressure injury

Prevention — simplified

- OT Recommended
- Silent & Reactive
- Zero Alarm Noise

<18

Braden score triggers reactive surface

EPUAP/NPIAP 2019

16x

longer surface contact in LTC vs. acute

Jia YJ et al., J Tissue Viability, 2024

\$0

No pump, power, or maintenance

OT Clinical Scenario	Why MENSA	Setting
Post-surgical day 1-7	Reactive — no repositioning needed in the immediate post-operation window.	ACUTE
Braden ≤18 on admission	Meets guideline threshold — documentable in care plan.	ALL SETTINGS
Cognitively impaired	Surface responds passively to patient movements.	LTC / CCC
Extended stay 30-120+ days	4-16x more surface contact — reactive is essential, not optional.	LTC / CCC / REHAB
